

# A graph for use with a Geopack stream flowmeter

Based on the equation:  $\text{velocity} = (0.000845 \times \text{revolutions per minute}) + 0.05$  also available as an excel sheet at [selb.org/killowen/webpages/publications](http://selb.org/killowen/webpages/publications)

(Don't forget that at low revolutions the meter will be less accurate due to the actual friction in the impellor)
