

ENVIRONMENTAL POLICY FOR SELB

In maintaining its responsibility to provide high quality education services, SELB recognises environmental management to be of equal importance to other prime management considerations. As such, we acknowledge that our activities and services impact, directly and indirectly, on the environment. In this respect, SELB accepts its obligation to minimise its environmental impacts through co-ordinated environmental management.

SELB is committed to:

- Preventing pollution through efficient energy management, waste minimisation and efficient resource consumption;
- Enhancing the aesthetic value of the site and supporting community environmental initiatives;
- Complying with relevant environmental legislation, regulations and appropriate sector best practice initiatives;
- Continual environmental performance improvement through setting and achieving realistic objectives and targets via the management review meeting;
- Communicating this policy to all employees and providing appropriate training; and
- Making this environmental policy available to interested parties, on request.

SELB will implement and review this policy within the framework of a systematic environmental management system. The Board accepts the principle of 'best available technology not entailing excessive cost' in relation to environmental initiatives.
